Monika Samuelsson
Coordinator for courses at Didacticum

Higher education pedagogy for teachers responsible for courses

Högskolepedagogisk kurs för lärare med kursansvar

The course comprises 120 hours equivalent to 4,5 credits

The course is given for

Teaching staff

Entry requirements

Bachelor's degree and the course Higher Education Pedagogy for New Teachers, or equivalent.

Intended learning outcomes

After completing the course, the participants should be able to:

- reflect on theories of teaching and learning in higher education concerning the design of courses,
- design, implement, evaluate and further develop courses that support all students' learning,
- plan for their own continued pedagogical competence development.

Course content

This course covers the design and implementation of courses, grounded in academic research within pedagogy and learning. Relevant laws, rules, and regulations regarding course design and assessment will also be addressed; this includes laws such as the Discrimination Act, the DOS Act, Administrative Procedure Act, and GDPR. The course will also present details of resources for student support that are available at the university.

The design and revision of course syllabi are discussed in relation to guidelines from respective faculties. The course deals with how intended learning outcomes can be written at an appropriate taxonomic level, how to choose learning activities and how examination forms are chosen so that the students can show that they meet the intended learning outcomes. Issues such as how to create student-centred and collaborative learning opportunities will also be discussed during the course, as well as how courses can be designed to support sustainable development.

The course also deals with formative feedback and how this can be used to provide feedback on performance. The role of evaluation as a basis for reflection and further development of courses is discussed. Pedagogical digital competence for effective use of digital tools to support students' learning is also included. Pedagogical reasoning and conscious choices about which physical and digital spaces/tools might best support students' learning are considered.

In the course, we also reflect on the role of higher education in terms of democracy and internationalisation, including equal opportunities can be promoted and how courses can be more inclusive for all students.

Finally, the course also addresses how participants can assess and plan for their own pedagogical competence development

Teaching and working methods

Lectures, seminars, group work in both physical and digital form. In addition to this, the participant will need to undertake self-study activities.

Qualification for certificate

To receive a certificate, the participant is required to reflect on the role of course leader and highlight examples that show that they can design, implement, evaluate and develop courses that support students' learning with regard to relevant aspects covered in this course. This should be presented in the form of a pedagogical portfolio. The participant should also describe plans for their continued pedagogical competence development.

Approved by Didacticum's Board of Directors September 12, 2023

Applies from: Spring 2024
